

ORIGINAL SYNTHETIC FIXTURE TEXT — invented for controlled software evaluation; not a real publication or experimental result.  
Paper P152 / 虚构论文。Temperature 42°C; A163V and T212S tested in the same synthetic protocol. 产品为羟基四氢嘧啶。Specific  
enzyme activity and fermentation product titer are separate outcomes.

ORIGINAL SYNTHETIC FIXTURE TEXT — invented for controlled software evaluation; not a real publication or experimental result.

Table 3: At 42°C, A163V specific activity 1.50 U/mg and product titer 4.60 g/L. T212S specific activity 2.40 U/mg and product titer 3.90 g/L. Thus T212S leads specific activity while A163V leads product titer. Yield and productivity were not reported for these 42°C conditions.

ORIGINAL SYNTHETIC FIXTURE TEXT — invented for controlled software evaluation; not a real publication or experimental result.  
Conclusion: The rankings depend on the chosen metric. These synthetic data do not establish a universally superior variant, optimal temperature, or stability beyond the tested condition.
