

ORIGINAL SYNTHETIC FIXTURE TEXT — invented for controlled software evaluation; not a real publication or experimental result. Paper P74 is an invented narrative review, not a new experiment. It describes P17, P31, and P52 and contributes zero independent sheets. P17 compares calcium baths; P31 uses a different measurement protocol; P52 increases cellulose fraction.

ORIGINAL SYNTHETIC FIXTURE TEXT — invented for controlled software evaluation; not a real publication or experimental result. Evidence map: P17 and P52 use 10% strain after 24 hours wet equilibration; P31 uses 15% strain after 1 hour. No source in this review establishes cell viability, biodegradation, cost, industrial print speed, or clinical suitability. Counting this review as another experimental sample would double-count its underlying studies.
